

# Mitchgla

## Parent plants

Gala colour mutant

## Origin

Discovered by R.D. Mitchell, Hastings, New Zealand.  
Introduced in 1978.

## Growth

Moderate strong to fairly weak growth, easy to shape, type of tree similar to Golden Delicious.

## Flowering

Approximately identical to Golden Delicious. Slight tendency to biennial bearing.

Pollinators are: Idared, Cox's Orange Pippin, Golden Delicious, Granny Smith, Elstar, Gloster, Fuji, Braeburn, Pinova and ornamental apple trees.

## Productivity

Early, regular and good.

## Harvesting

Last week of September.

## Appearance

Small, fairly round to somewhat cone-shaped. Yellow base colour with a deep red, very streaked blush.

## Quality

Very juicy, crispy, firm apple with yellow fruit flesh. Sweet.

## Storage life

Good. Shelf life: good.
